

Poligenic Risk Score

KICK-OFF MEETING

MEETING: agenda

Project description

Project Goals, Values & Guidelines

Team Introduction

Communication plan and guidelines

Project Tools & Infrastructure

PROJECT: Description

PROVIDE A MEASURE OF DISEASE RISK DUE TO GENES

Using huge amounts of

Gene Data

Medical records

with the help of

Machine Learning

Awesome developers*

*and coffee

PROJECT: Goals

NOW

Gather as much gene and medical data as possible
Define/create an algorithm to generate accurate risk scores

Always

Implement and write the code in a way that the work you are doing
can also be integrated in other similar projects

Later

Integrate the risk scores within Novogenia services

Soon

Provide customers with a simple way of finding out what their
DNA has prepared for them, and ways to prevent or reduce the risks

PROJECT: Values & Guidelines

Clear Business overview

Understanding the business needs and the reasons behind the project will help the team develop features that align with the business values and with the overall business plan.

Become an **AMAZING** team

Who needs heroes when we have developers that can work together and create an amazing team which will handle all the challenges coming their way?

Sharing knowledge and know-how

Knowledge is power only if it's properly used and shared with other that need it. Sharing the know-how will greatly reduce the times and effort needed from others to work on this project.

Library level documentation

We do not try to rebuild the Library of Alexandria but we can build our project documentation like future generations depend on the information that we are writing.

TEAM: Introduction

Name

Profession / Position

"How long do you work on IT projects?"

What was your last project (Title, Technologies)?

What do you choose and why? Coffee, tea or water?

ROLES: Development

Alexandru Daia

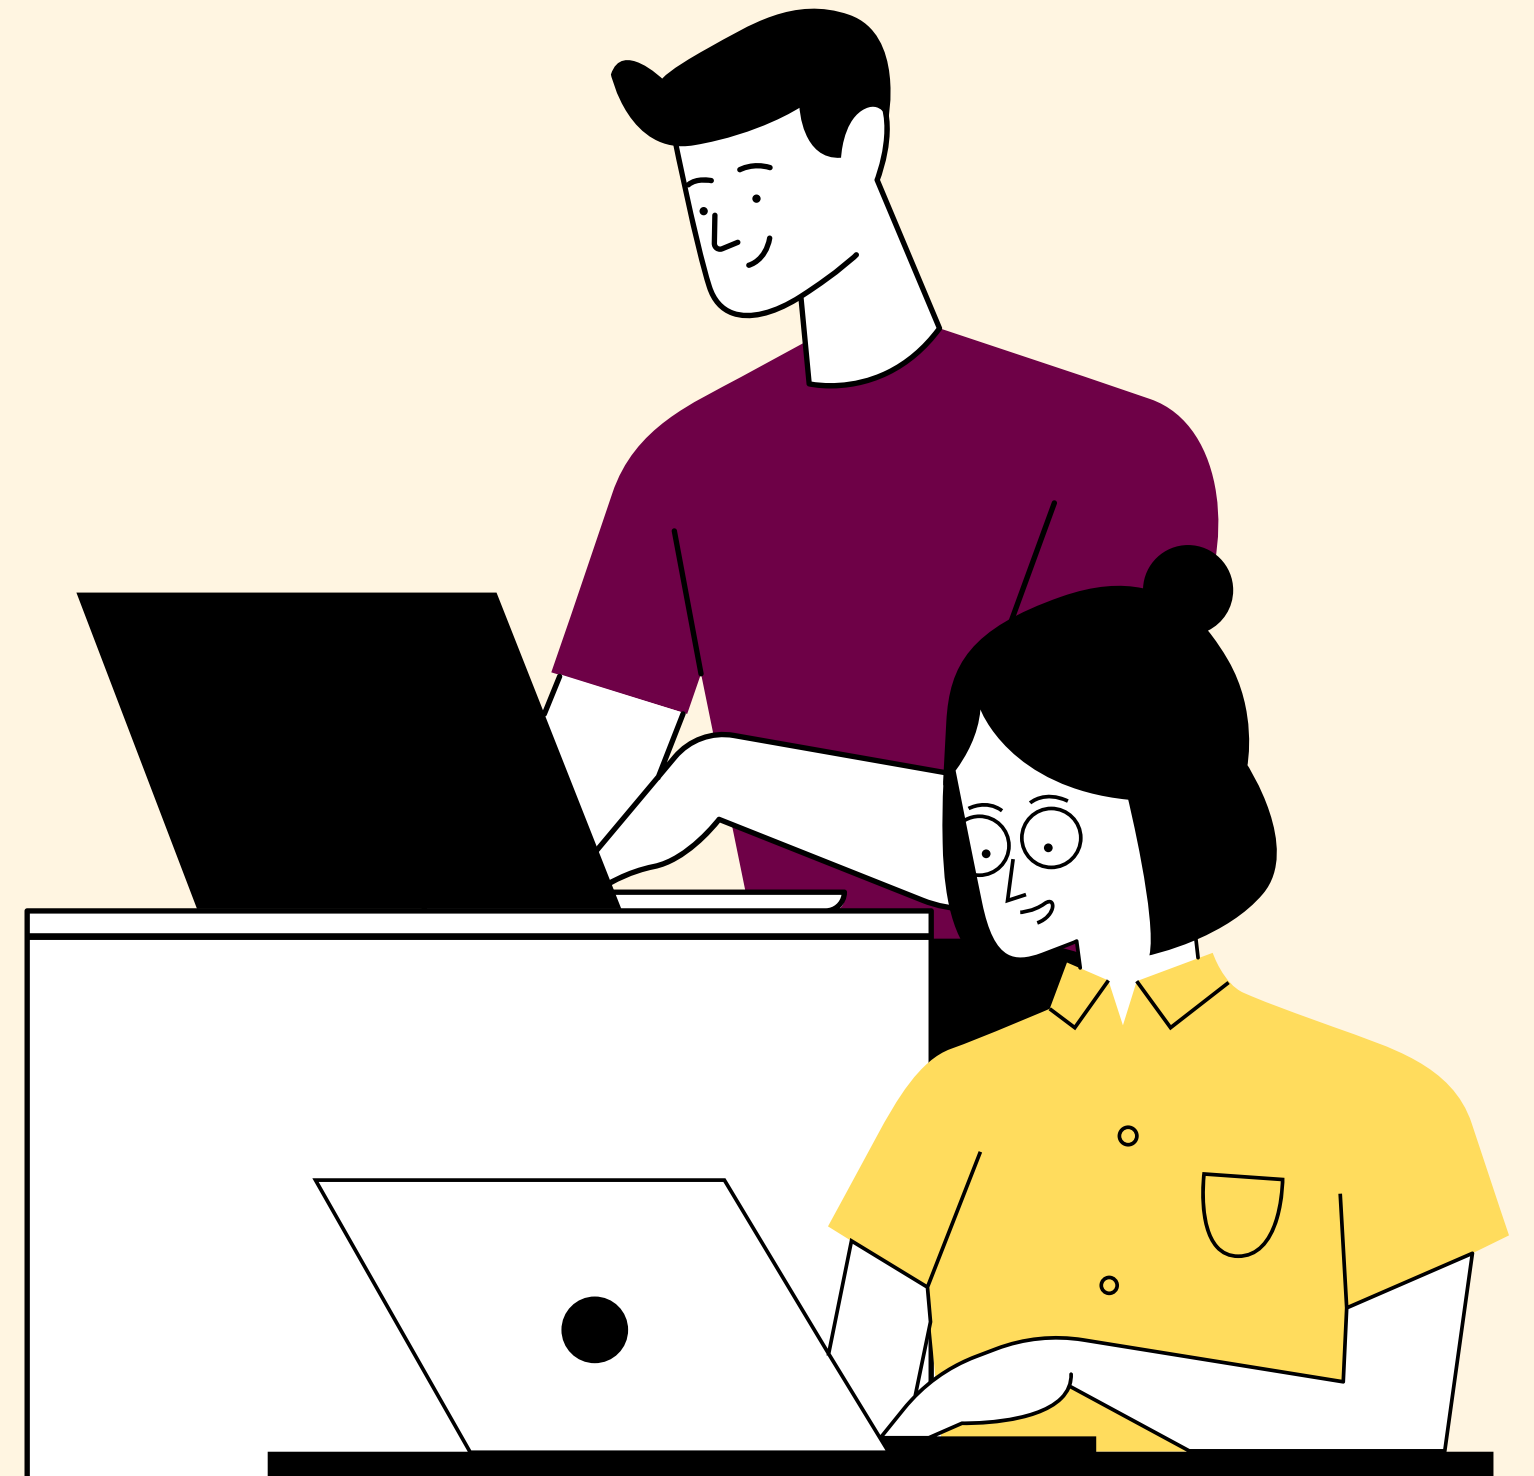

Algorithm Developer

Maximilian Schneider

Natural Scientist and Algorithm Developer

Sebastian Tannerberger

DevOps

ROLES: Management

Milan Noro

Project Manager

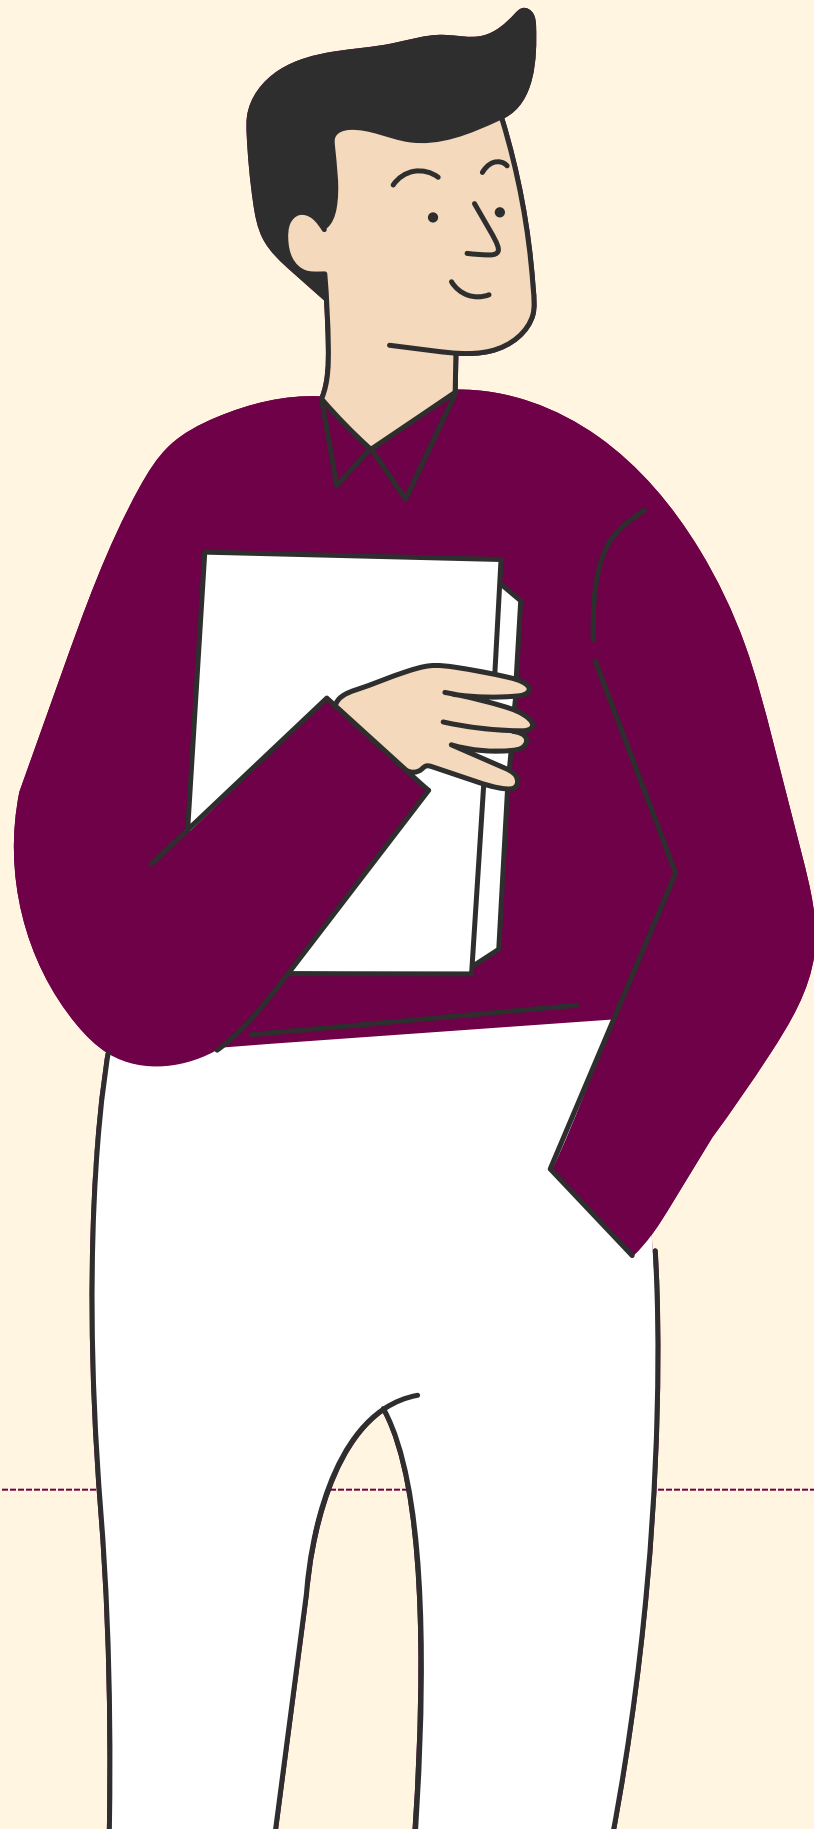

Csilla Popa

Scrum Master

Razvan Nechifor

Product Owner

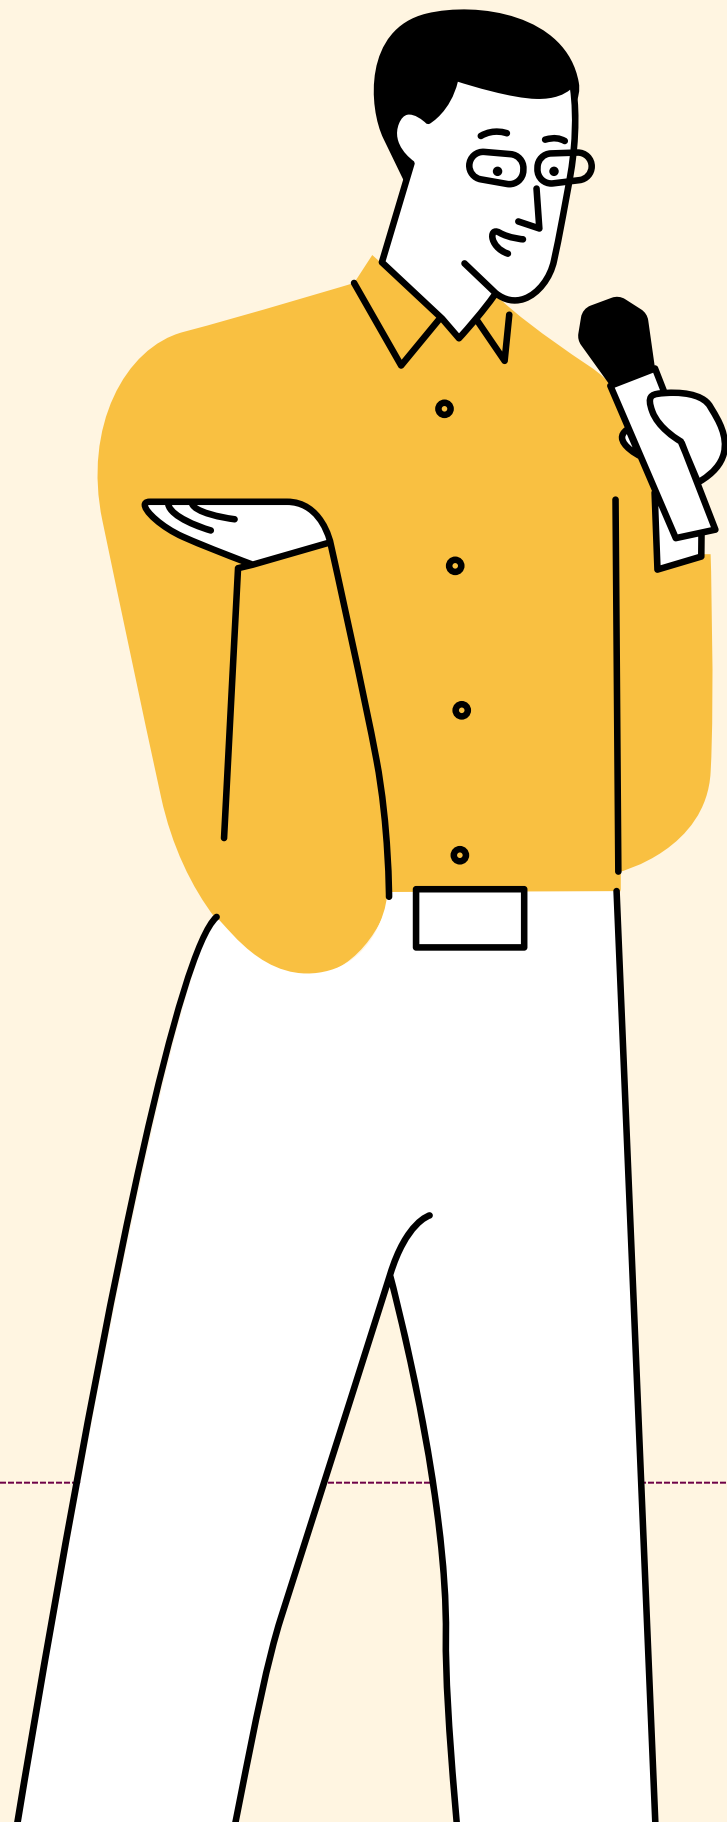

ROLES: Stakeholders

Daniel Wallersdorfer

Bernhard Ederer

Christopher Bartl

Constantin Rauliuc

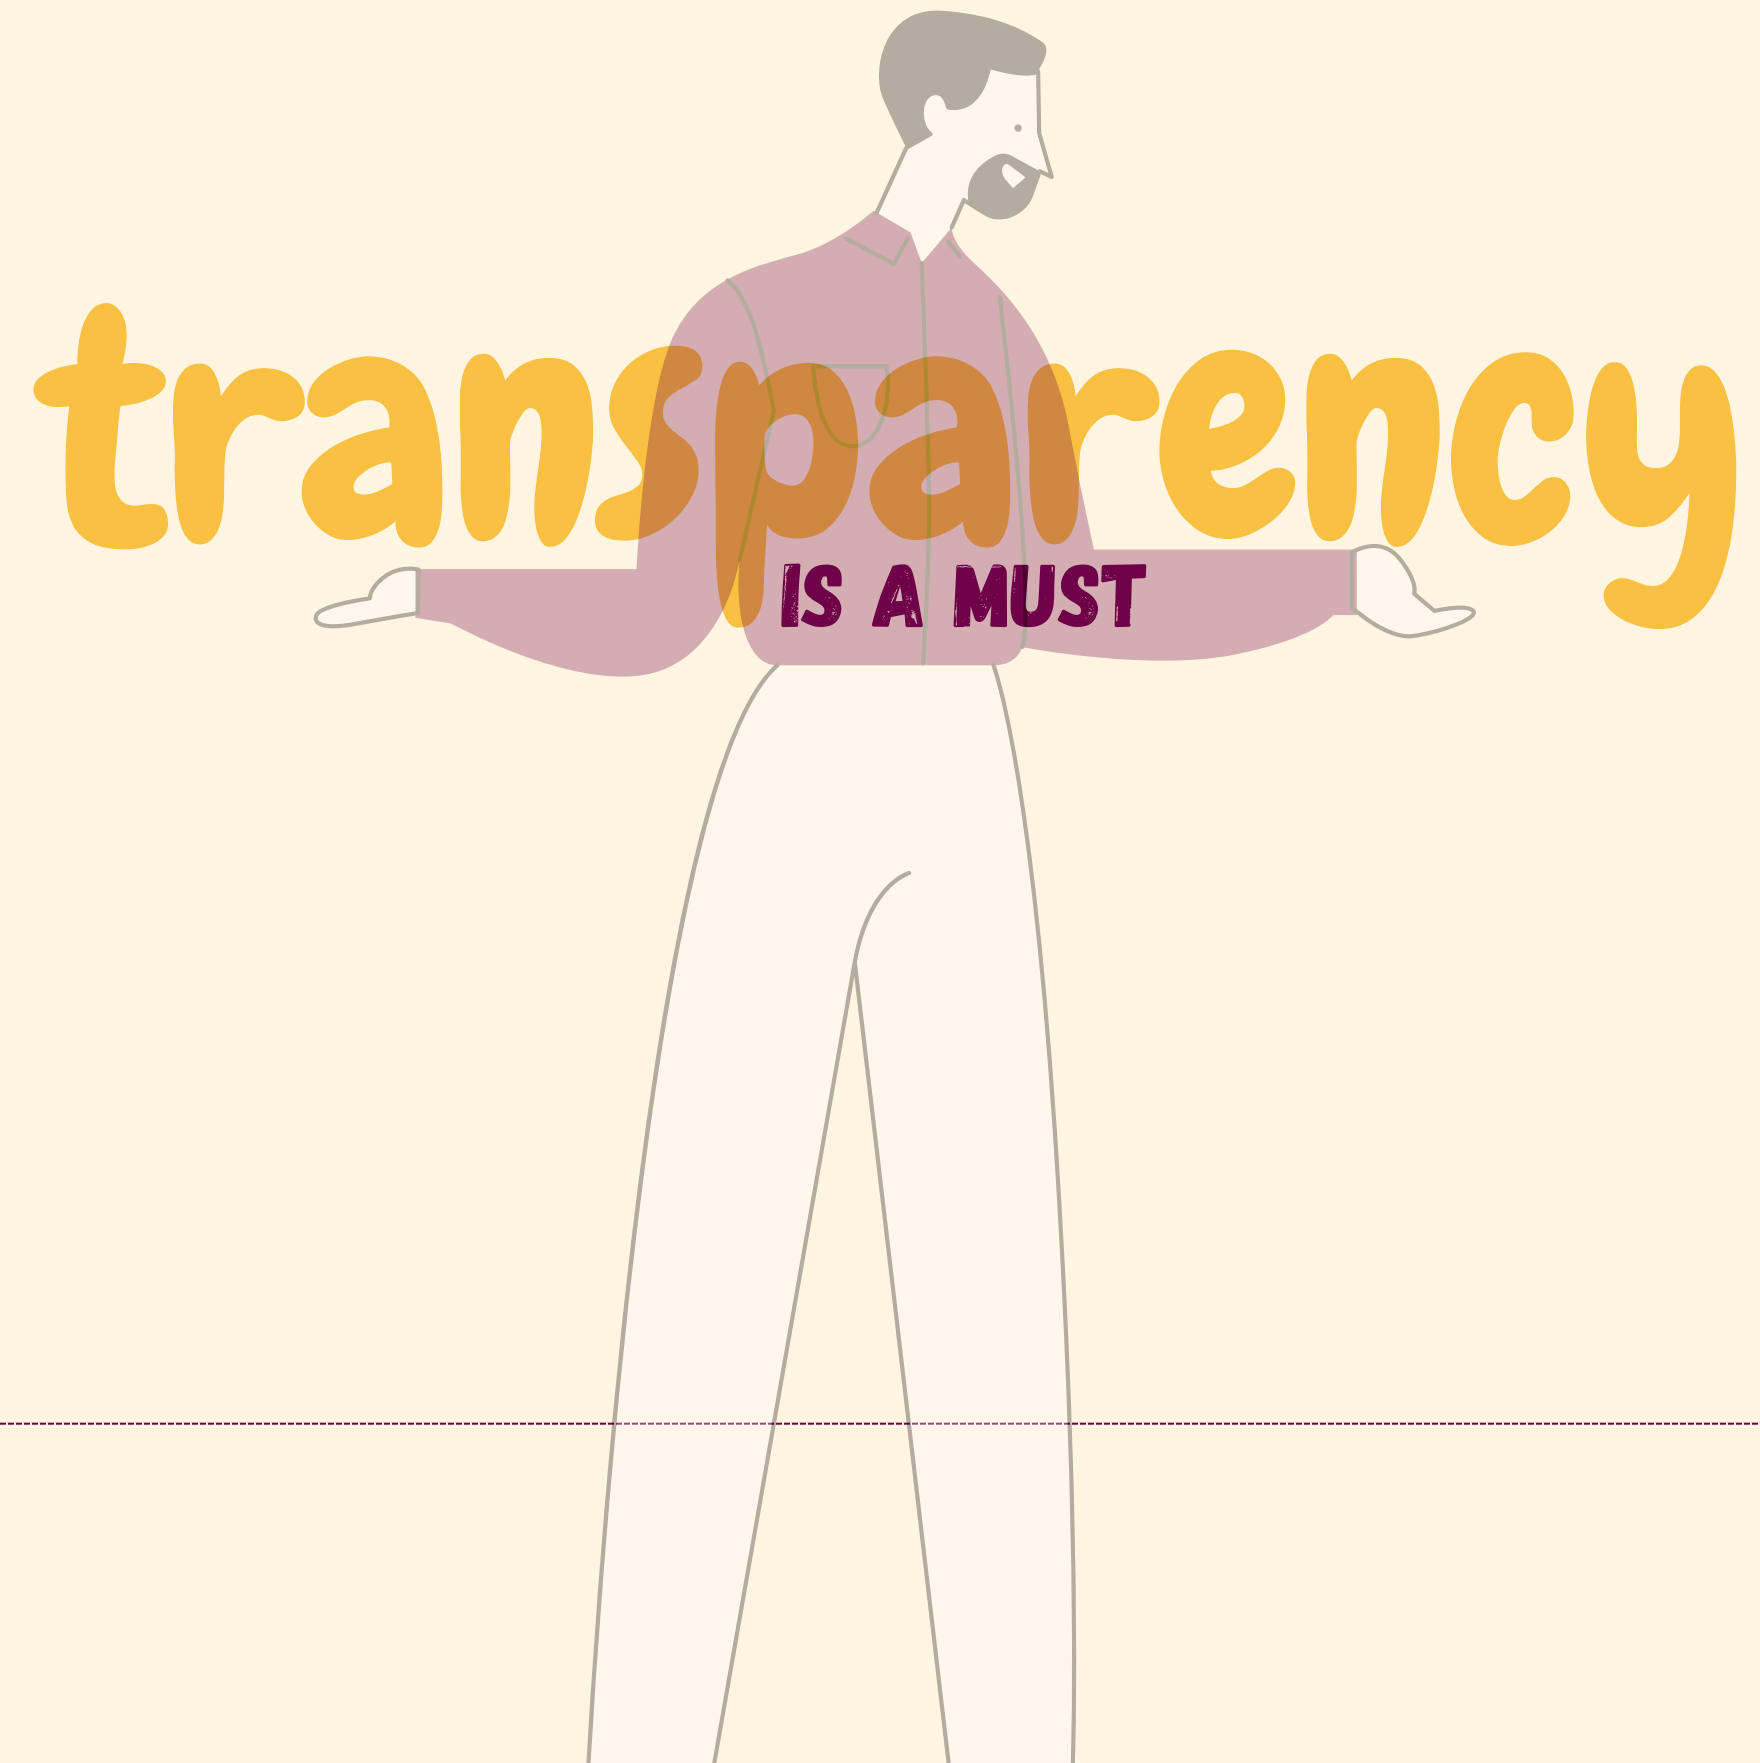

PROJECT: Communication

Microsoft Teams

Conferences / Meetings / Team channels

Via Project tools

Comments / User Stories / WIKI

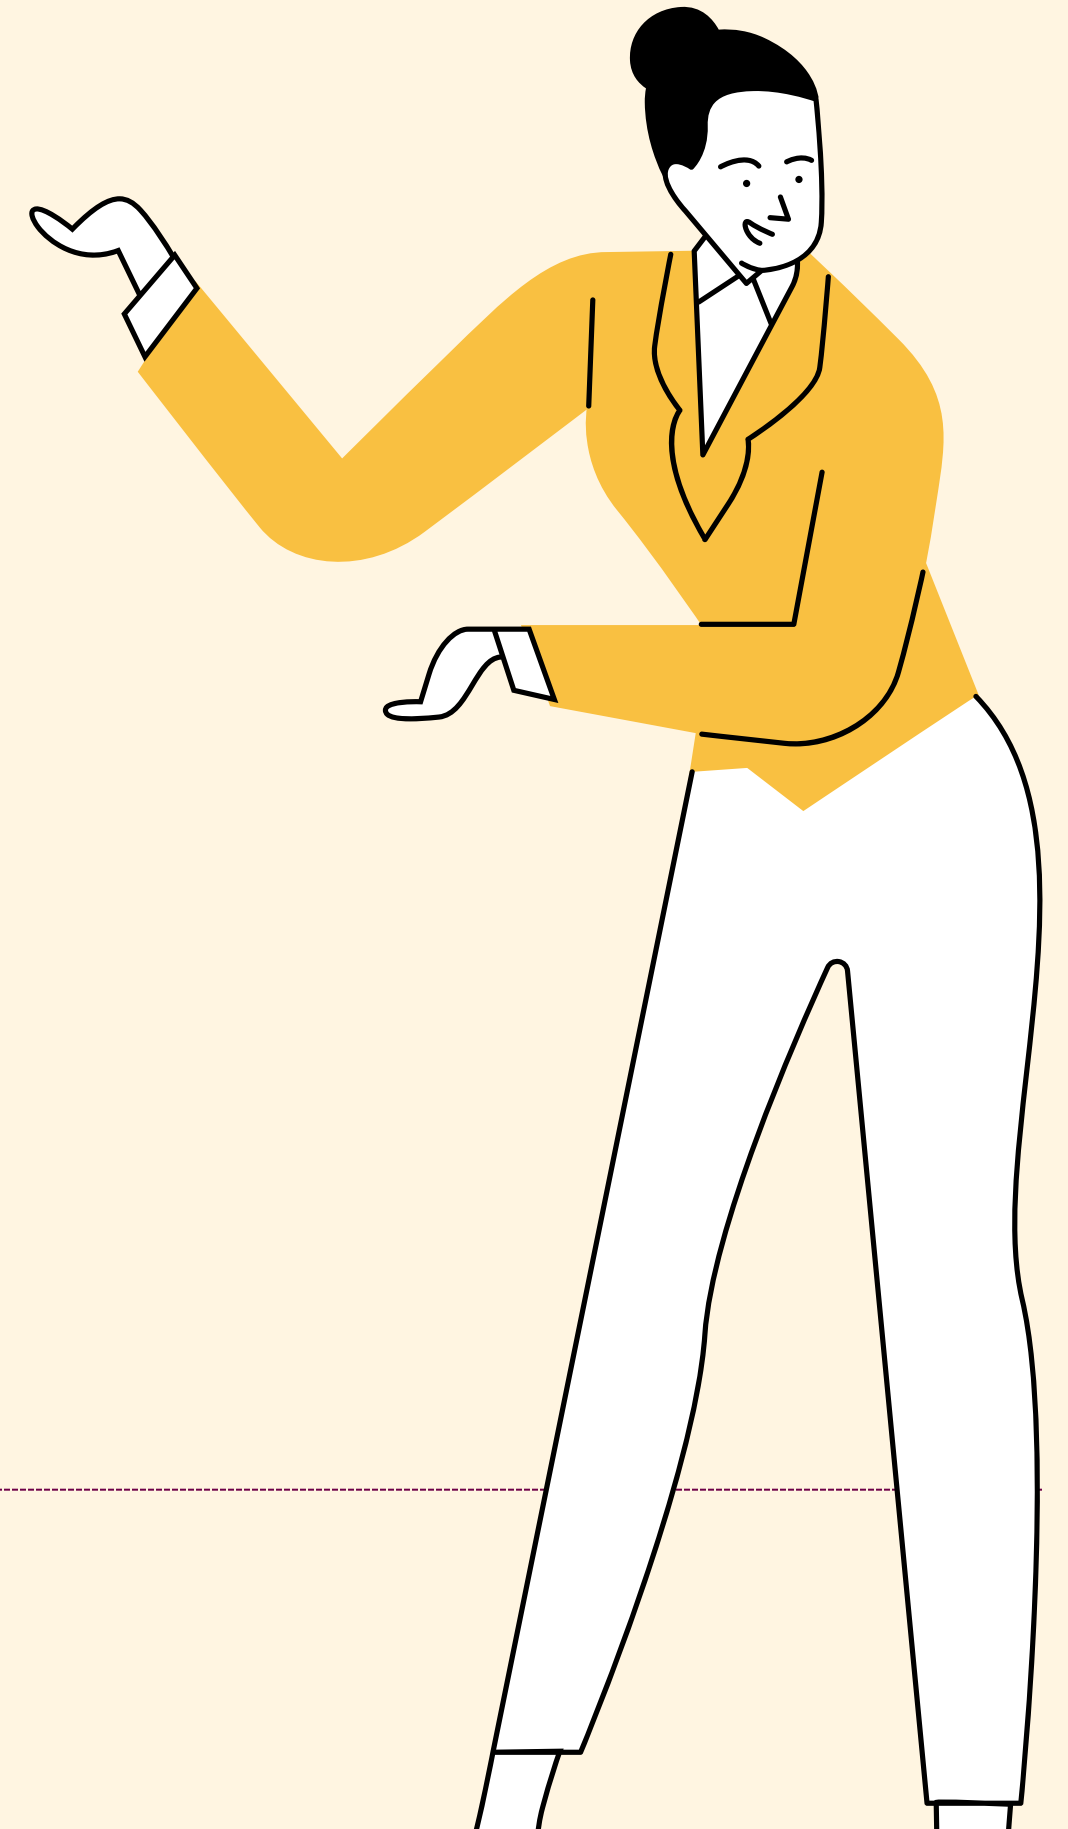

Communication Guidelines

Communicate in a transparent way, by using the provided project public channels
Avoid using emails and private messaging to discuss/communicate project related subjects

Open your camera in remote calls and meetings

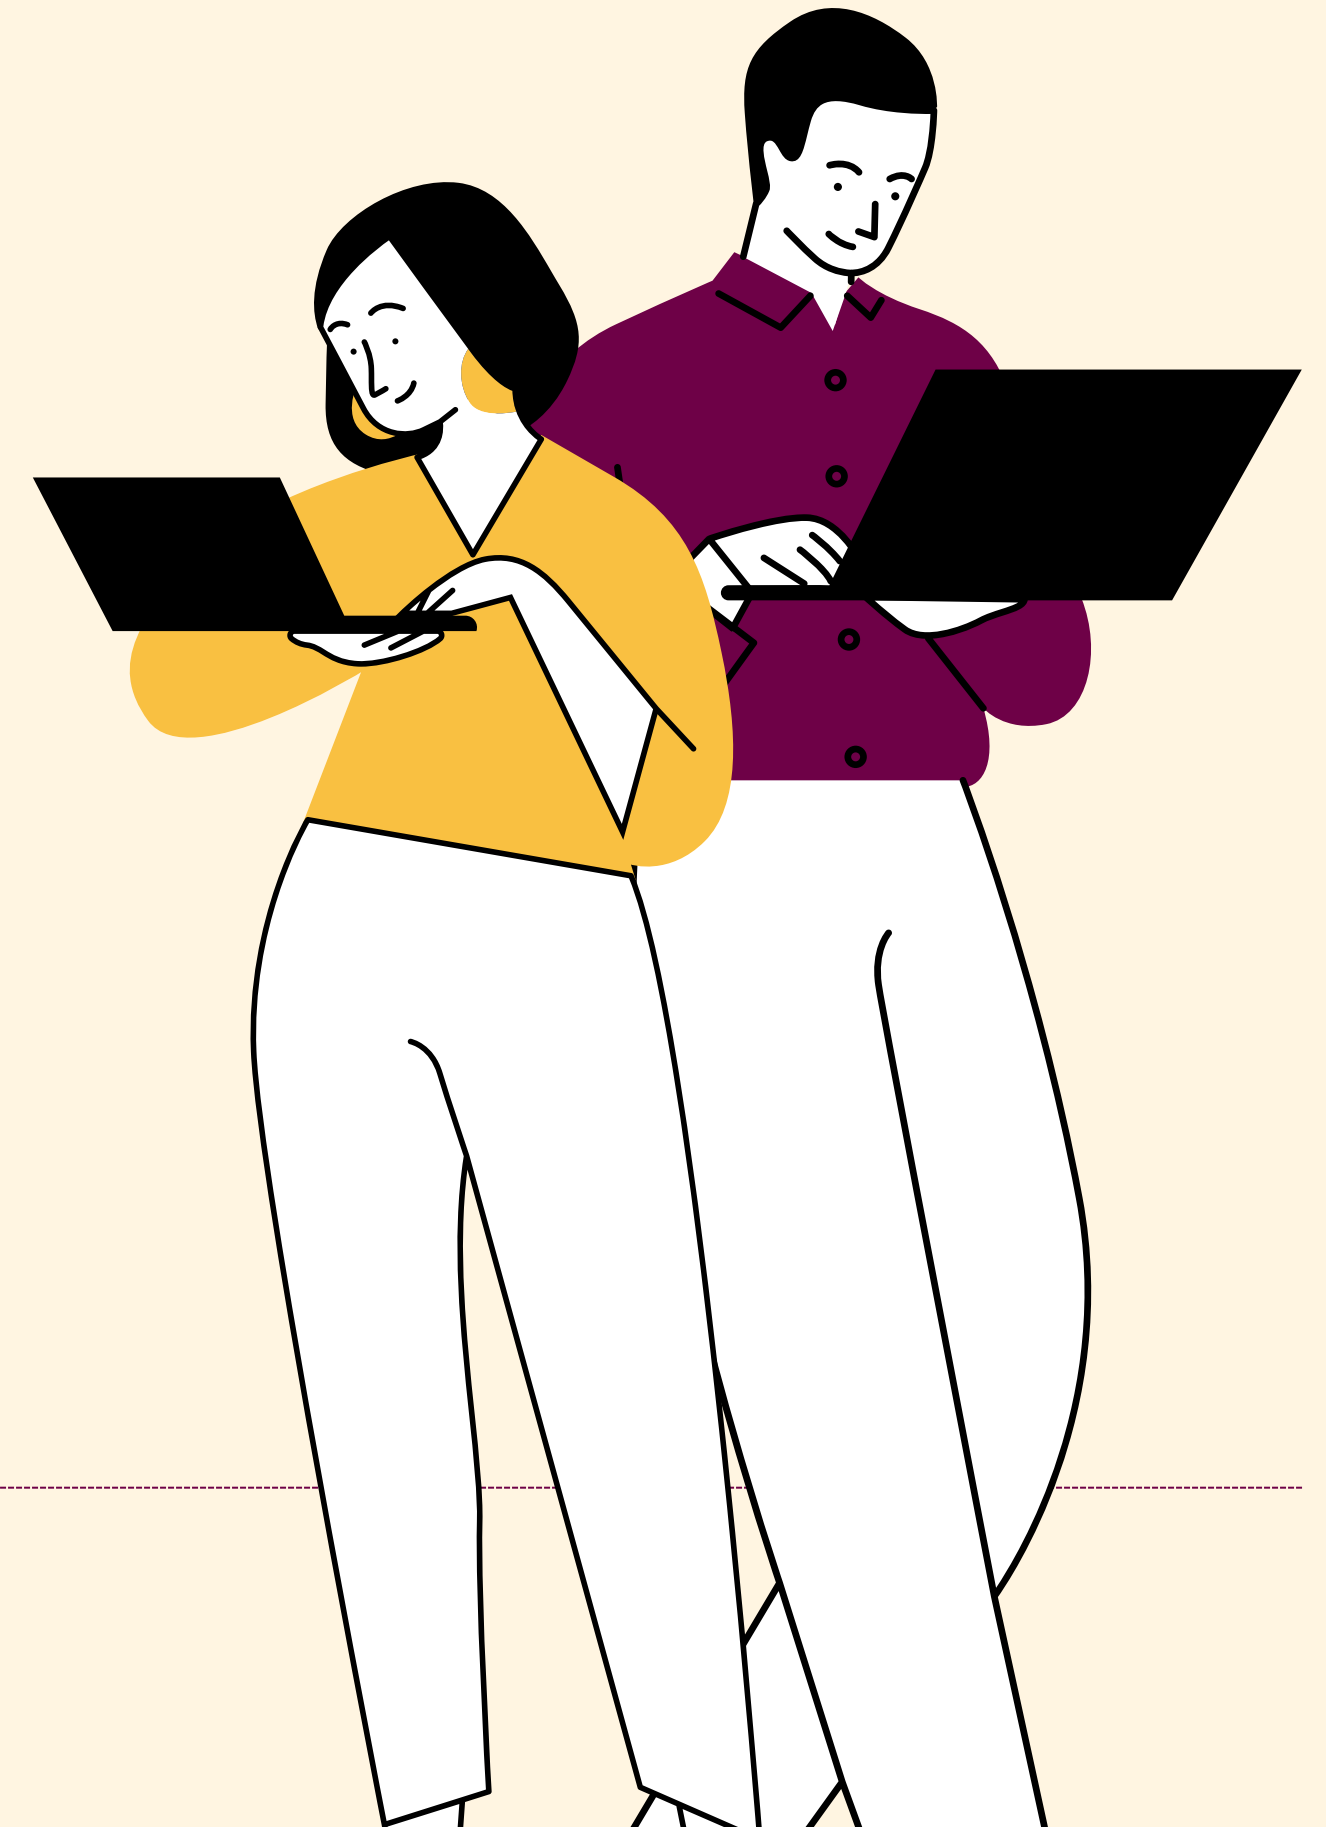

Silence is the enemy of progress

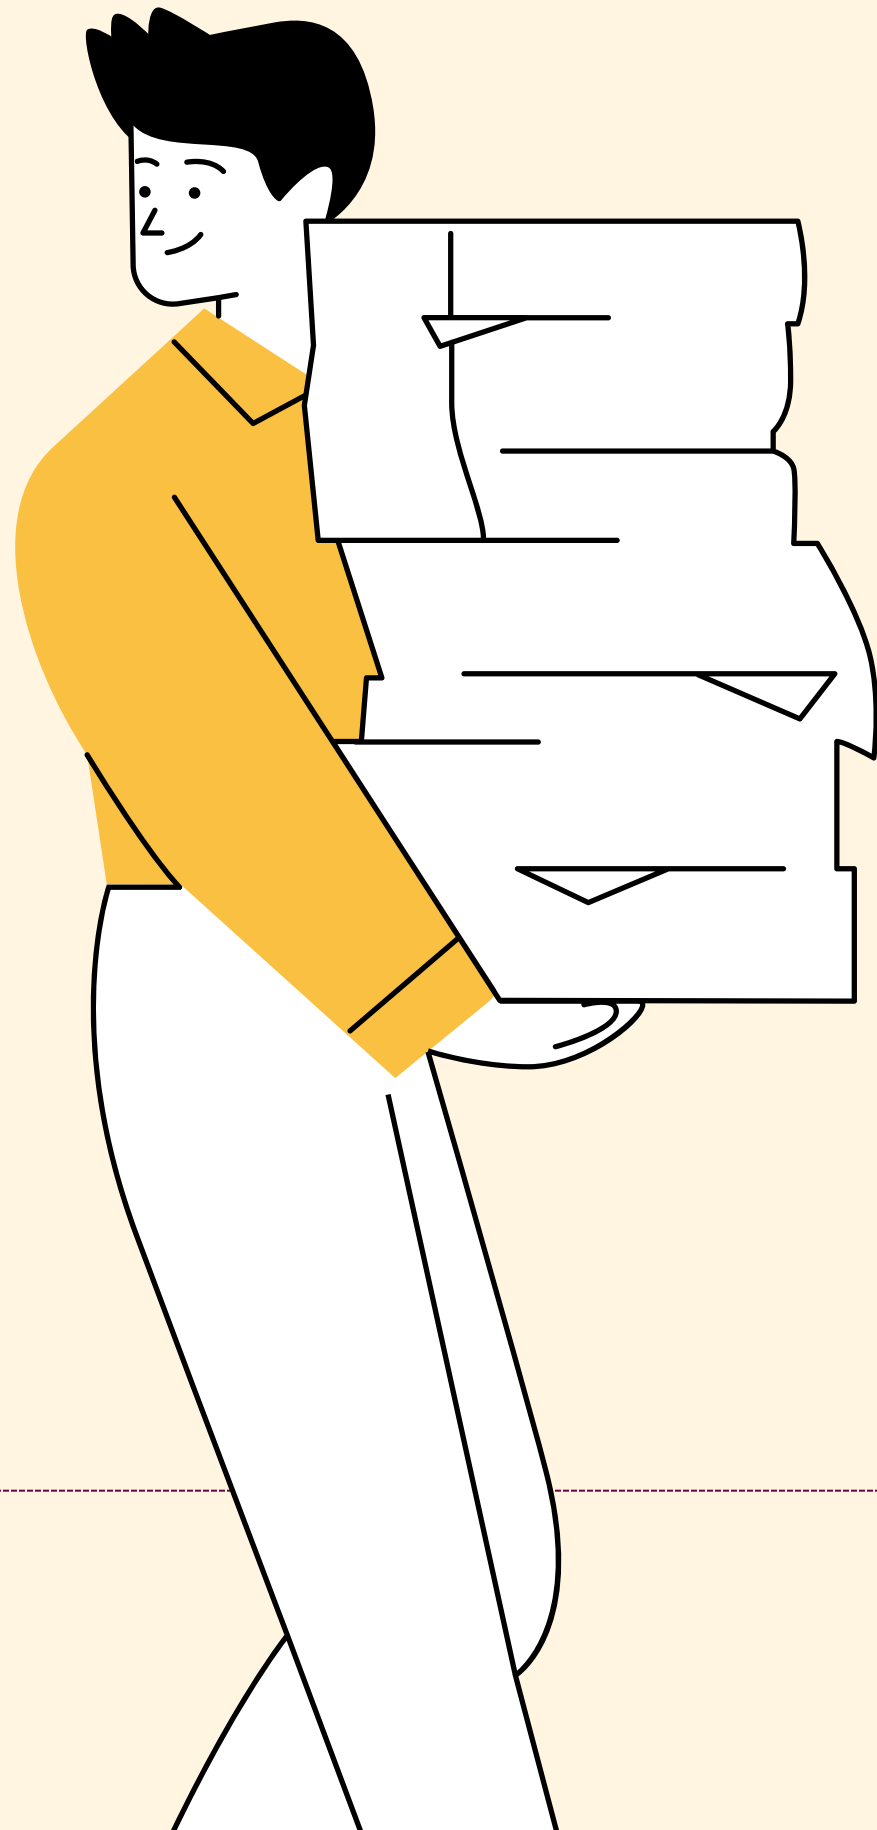

Please ask all the questions you have and voice your opinion with each occasion you have.
There are no stupid questions!

PROJECT: Tools

JIRA	Issue & Project Tracking Software
Confluence	Project documentation
Draw.io	Integrated in Confluence
BitBucket	Code versioning / GIT
FIGMA	Future design and prototyping

PROJECT: Infrastructure

Azure

INVENT WITH PURPOSE. The infrastructure core.

NoSQL / SQL DB*

+Sebastian will add more on this

UK gene databank

Genopedia database

Code language: Python

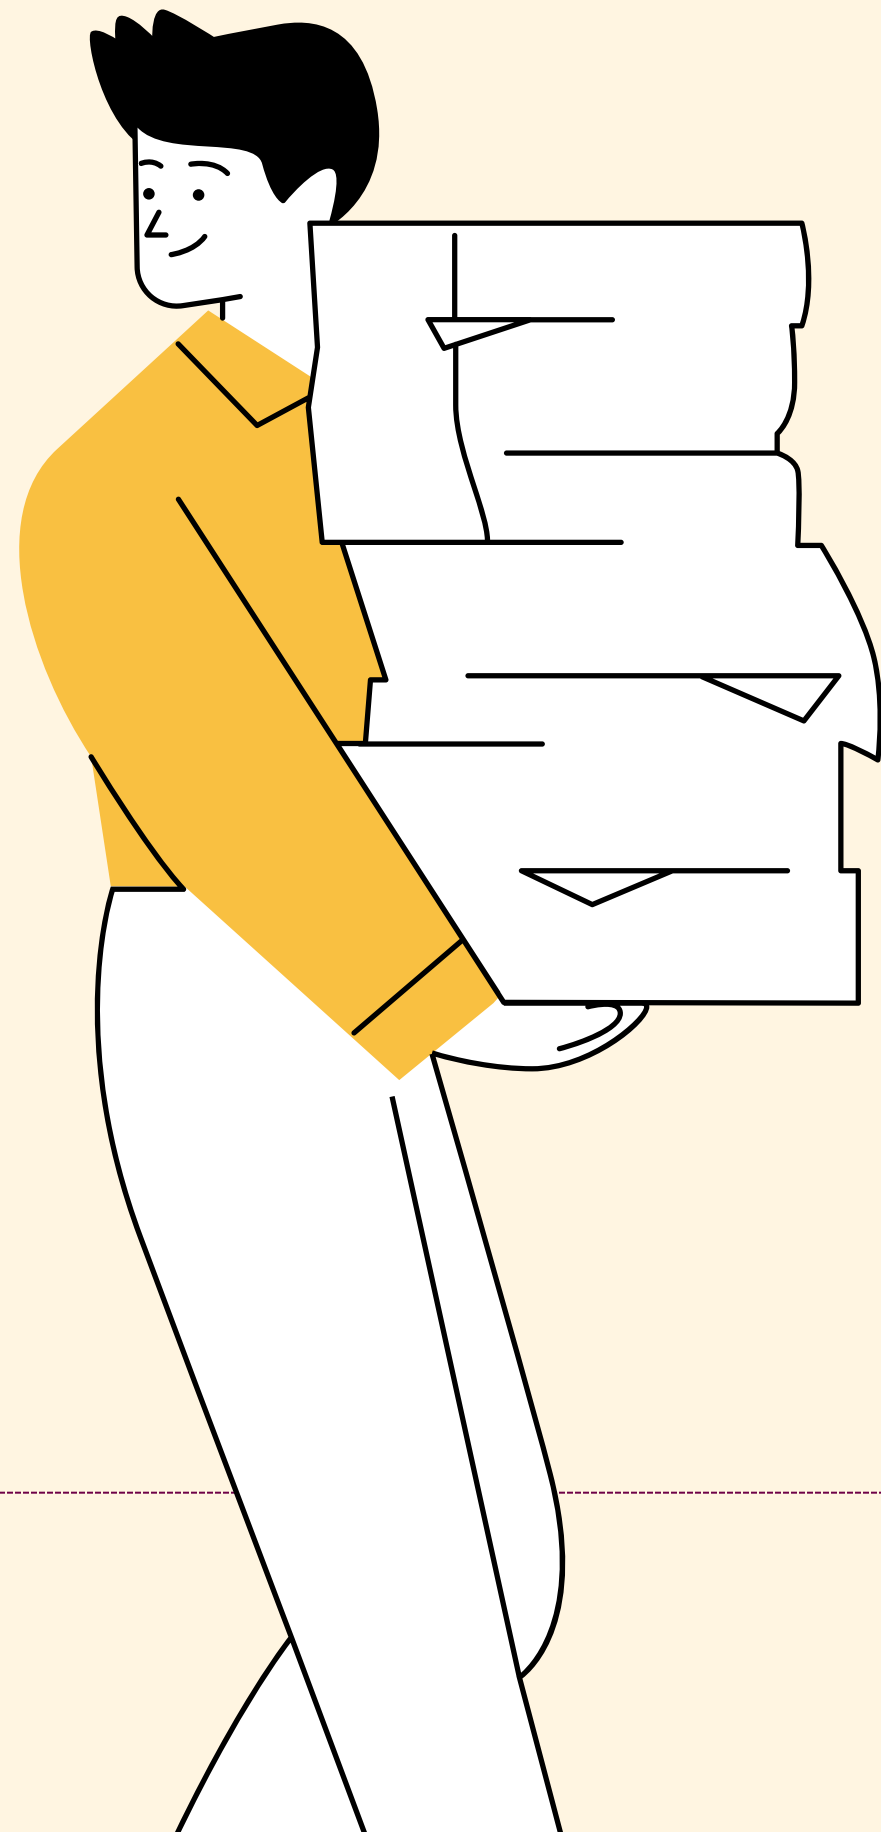

*The nature of the feature / requirements might imply one or the other

Let us know **What is**
important to
you? **And we will make**
the changes

**COMING TOGHETER IS A BEGINNING,
STAYING TOGHETER IS PROGRESS, AND
WORKING TOGHETER IS SUCCESS**
